CHAPTER I

1 INTRODUCTION AND OBJECTIVES OF THE SURVEY

1.1 INTRODUCTION

Agriculture is a dominant sector of Ethiopian economy which makes a lion share contribution to the Gross Domestic Product, employment and foreign exchange earnings. Agriculture is still believed to remain a sector that plays an important role in stimulating the overall economic development of the country in the years to come. This would be realized if and only if strenuous efforts are made by the government and other concerned stakeholders including farmers to increase agricultural production and productivity. Several factors can influence agricultural production and productivity improvement. Among other factors, the increased use of modern farm inputs, modernization of farming activities by using improved farm implements as well as introduction of modern farming technologies to the sector are the major ones. In order identify, plan, implement and monitor agricultural projects and programs, availability of reliable, comprehensive and timely statistical data on the overall performance of the sector is essential.

Ethiopian Statistical Service, ESS, (Formerly known as Central Statistical Agency (CSA)) of Ethiopia has been conducting integrated annual agricultural sample surveys and has been providing the survey results to the ultimate data users for more than three decades. Out of the annual agricultural sample surveys carried out by the ESS, Belg season agricultural sample survey is the one that generates data on crop cultivated area, production and farm management practice for the major Belg season crops for the private peasant holdings annually. In the previous years, two reports were used to be generated from the Belg agricultural sample survey nearly simultaneously which are named as a report on area and production and report on farm management practices. Since the year 2013/14 (2006 E.C.), the Belg season agricultural sample survey findings are compiled and produced in only one report with the basic idea of making the report user friendly and handy. The report contained the data on crop cultivated area and production as well as farm management practices of the private peasant holdings of the major Belg crops.

The findings of the 2021/22 (2014 EC) Belg survey are summarized and presented using tables and graphs at national and regional levels.

1.2 OBJECTIVES OF THE SURVEY

There are two main objectives of the 2021/22 (2014 EC) Belg season agricultural sample survey. These are to generate basic quantitative information on:

- Crop cultivated area, production and yield of major Belg season crops and
- The use of different farm management practices that includes fertilizer applied area by crop type, the type and quantity of fertilizers used, areas applied with improved seeds and indigineous seeds, areas applied with pesticide, areas under irrigation, and areas under extension package by crop type and category.

Given the objectives, the survey findings are presented in such a way that, first crop cultivated area and production is discussed and then followed by farm management practice findings, subsequently.

1.3 Number of EA's and Households Covered in Belg, 2014 EC (2021/22) Survey

A slight variation on the number of planned and covered EA's of Belg, 2014 EC (2021/22) Survey was observed. This is mainly due to Belg season agricultural activity is highly dependent on the wetheather and the rain fall conditions of the area where Belg crop growing EA's are located.

Table 0. Number of EA's and Households Covered in Belg, 2014 EC (2021/22) Survey

No.	REG	Number of EA'S Planned	Number of EA Covered	Number of Households Covered

CHAPTER II

2. SURVEY METHODOLOGY, DATA COLLECTION AND PROCESSING

2.1 COVERAGE

The 2021/22 (2014 EC) Annual Agricultural Sample Survey of the Belg season covered the entire rural parts of the country. The survey was planned to cover a total of nearly **1,394** Enumeration Areas (EAs). However, in 128 EAs among the selected EAs, the survey was not successful due to various reasons (mainly due to wheather related conditions). Therefore, the survey was successfully accomplished involving only 1n 1156 EAs (for detailed information of covered EA's see Table 0 above).

2.2 SAMPLING FRAME

The list of Enumeration Areas (EAs) was obtained from the planned but was not excuted 2018 Population and Housing Census Map (Carthographic) work. From the list of the EAs, a set of sampled EAs were selected based on the sample design proposed for the survey. Once the selection of the sampled EAs was accomplished, a fresh list of households within each selected EA was carried out. The list of agricultural households in each EA was used as a sampling frame from which the agricultural households are finally selected as sources of data.

2.3 SAMPLE DESIGN AND SELECTION SCHEME

In order to select the survey sample, a stratified two-stage cluster sample design was implemented. Enumeration areas are the primary sampling units (PSUs) whereas the agricultural households are the Secondary Sampling Units (SSUs). The sample size for the 2020/21 agricultural sample survey was determined by considering both the required level of precision for the most important estimates within each domain and the amount of resources allocated to the survey.

In order to reduce the non-sampling errors, considerable effort was allocated to manage the survey in terms of quality and operational control. With the exception of Harari, and Dire

Dawa, each region was taken to be the domain of estimation. Each zone of the regions / special woredas was adopted as a stratum for which major findings of the survey are reported.

Enumeration areas from each stratum were selected systematically using a probability proportional to size sampling technique (PPS); size being the number of agricultural households. From the fresh list of households prepared at the beginning of the survey, 20 agricultural households within each sampled EA are selected systematically. The estimation procedures of totals, ratios, sampling error and the measurements of precision of estimates (CV) of the survey are given in Appendix-I, II and III.

2.4 FIELD ORGANIZATION

The Ethiopian statistics service (ESS) has 25 statistical branch offices located in different parts of the country. Each branch office has its respective branch head, statisticians, field supervisors, enumerators, other supporting staffs and drivers. By the year 2021/22 (2014 EC), 21 Branch offices are involved in the field operation activities of agricultural sample survey of the Belg season. In order to accomplish the data collection activities, field enumerators are equipped with the necessary survey equipments such as GPS, compass, Tablet, measuring tape, questionnaire, etc. To facilitate the field work of data collection and for field supervision, the branch offices used the available four-wheel drive vehicles. The Addis Ababa, Jijiga, and Shire statistical branch offices did not take part on the 2021/22 (2014 EC) Belg season agricultural sample survey as Belg season farming activities by small holder private holdings are not practiced in the EAs of the branch offices. The 2021/22 (2014 EC) Belg season agricultural sample survey was not also carried out in the territory of Mekele ESS branch office due to the war and conflict firedout in the area.

2.5 TRAINING OF THE FIELD STAFF

At the beginning of the survey year, the field staff-training program was carried out for the survey in two-stages. The first stage training was the training of the trainers, together with dry season irrigation survey, which was carried out at Adama town for eight consecutive days. In the first stage training, the trainers and the trainees were ESS branch office

statisticians (senior supervisors) and staffs from the head office respectively. The first round trainees who in turn trained the ESS branch office fieldworkers as of statisticians, field supervisors and enumerators. That is, the head office professionals/experts who were trained in the first stage in turn provided similar trainings for statisticians, field supervisors and enumerators for 13 days in the selected Statistical Branch Offices as the center for the second round training. During the second-stage training, the trainees were given detailed classroom training on the objectives and uses of the Agricultural Sample Survey (AgSS), concepts and definitions of terms used, the method of area measurement, interviewing procedures, etc.

The second stage training also included a field practice to reinforce the procedures discussed in the classroom, to identify the boundaries of the households included in the EAs and to practice interviewing, area measurement using GPS and compass rope techniques, etc.

2.6 METHODS OF DATA COLLECTION

The agricultural data for 2021/22 (2014 EC) Belg season crops were collected from the selected rural agricultural households by interviewing the respondents (subjectively) supported by questionnaire and by measuring physically (objectively) the farm fields (areas) for the selected agricultural households using the modern technologies/equipment and software namely Tablet and Measure Software.

A major characteristic of Ethiopian agriculture is the existence of two well-known crop production seasons named as Meher (main) and Belg (short rain) seasons. Meher is a long rainy season which normally occurs from June to September. The Belg season most often refers to small rainy season which normally occurs from February to May mostly in limited areas of the country. Generally, the Meher season rain provides ideal crop growing moisture for the longer maturing crops.

A point of contention arises with respect to the pure definition of Belg crops. Belg cropping practices are heterogeneous across different parts of the country. The nature of the sowing period also overlaps with some of the Meher season crops. Consequently, the report on Belg Season crops in the past faced a problem of a clearly defined growing

period. To help clarify the two-crop season, the following definitions have been used since 1987/88. Belg Season Crops are defined as crops that are harvested during the months of March to August, while crops that are harvested during September to February are considered as Meher season crops.

The time period for data collection on area, production and agricultural practices of the Belg season was from ‘Megabit 1 to Ginbot’ 30/2014E.C. (March 8 to June 7, 2022GC). Crop cultivated area data are collected objectively using measurer software that was uploaded on the Tablets, while production data were collected subjectively by interviewing the agricultural holders by questionnaire based personal interview. The percentage change of crop yield expected this year relative to the previous year’s yield (condition factor) is collected from both agricultural holders and Development Agents (DAs) within each EA to estimate this year’s crop yield subjectively. Data on production of Belg season crops are then, computed by the use of the crop cultivated area estimates and the yield data collected from the sampled holders and DAs.

2.7 DATA PROCESSING

Census and Survey Processing System (CSPro) software was used by data processing experts to design the tablet-based field data collection applications based on the questionnaires prepared for each survey module by subject matter specialists. Validity checks such as ranges, skips and consistencies were included in the application to maintain the quality and field level consistency checking of the data. Computer Assisted Personal Interviewing (CAPI) using tablets technology was used to conduct face-to-face interview, cropland area measurement and others data collection . The collected data was then transferred to the supervisors’ tablets using Bluetooth. After checking the quality of data collected by enumerator, supervisors transferred the collected data to the server located at the head office using VPN network connection.

At the head office, further validity checks were done on each question and consistencies between questions. If error is observed during the validity checks, the data were sent back to the field with error reports for correction. After the corrected data was sent back to the head office, further processing was done on the completed survey data. The final stage of

the data processing was to summarize the data and produce statistical tables. Estimation of the statistical tables was done using CSPro and the tabulation component of IMPS (Integrated Microcomputer Processing System) software.

a. Data Entry, Editing, Coding and Verification

To insure the quality of the collected data, data editing, coding and verification tasks are very important. For this effect, these activities were carried out during the fieldwork through tablet enabled logical relationship and edit specification programs prepared and installed on the Tablet. Therefore, the data editing, coding, entry and verification tasks are accomplished at field during data capturing or collection activities was carried out. Furthermore, data consistency checking activities were handled at head quarter during data analysis.

b. Data Cleaning and Tabulation

Computer edit specifications and logical relationships among different questions/variables are prepared for use on Tablet and CSPro software is used for the purpose of data consistency checking. The data entry task is carried out/accomplished at field level during data collection using Tablet (that have fully operational data entry system). After the data capturing/entry is accomplished, the data are checked for consistency and cleaned using the data cleaning specifications prepared for this purpose. Finally, tabulation is done on personal computers to produce results as indicated in the tabulation plan.

Finally, tabulation was done on personal computers to produce results as indicated in the tabulation plan.

2.8 BASIC CONCEPTS AND DEFINITIONS

For a better understanding of the data presented in this report, the basic concepts and definitions of some technical terms and terminologies used in the collection of the agricultural sample survey data for 2021/22 (2014 EC) Belg season are indicated as follows.

Enumeration Area (EA): An Enumeration Area in the rural parts of the country is a locality that is in most cases less than and in some cases equal to a farmers' association in geographical area and usually it consists of 100 to 150 households.

Household:A household may be either:

- a) A one person household, that is a person who makes provision for his own food or other essentials for living without combining with any other person to form part of a multi-person household or
- b) A multi-person household, that is, a group of two or more persons who live together and make common provisions for food or other essentials for living. The persons in the group may pool their incomes and have a common budget. They may be related or unrelated persons, or a combination of both. These persons are taken as members of the household.

Agricultural Household:A household is considered as an agricultural household when at least one member of the household is engaged in growing crops and/or breeding and raising livestock in private or in partnership with others.

Holding: A holding is all the land and /or livestock kept, which is used wholly or partly for agricultural production and is operated as one technical unit by one person alone, or with others, regardless of the title, legal form, size or location.

Holder: A holder is a person who exercises management and control over the operations of the agricultural holding and that makes the major decision regarding the utilization of the available resources. The holder has primary technical and economic responsibility for the holding. The holder may operate the holding directly as an owner or as a manager. Under conditions of traditional agricultural holding, a person may be regarded as a holder when the person operates land or raises livestock in his own right, with or without getting helps from others. In other words, a holder is a person who decides on what, when, where and how to grow crops or raise livestock and the one who has the right to determine the utilization of the products.

Parcel: A parcel of a holding is any piece of land entirely surrounded by land, water, road, forest, etc., which are not part of the holding. A parcel may consist of one or more cadastral units, plots or field adjacent to each other.

Field: A field is defined as any plot of land which is a parcel or part of a parcel under the same or mixed crops or any other form of private holding.

Belg Season Crops: are defined as any temporary crops that are harvested during the months of March (Megabit) to August (Nehase).

Meher Season Crops: are those crops that are harvested during September (Meskerem) to February (Yekatit).

Irrigated area: refers to the area of land that is purposefully and actually provided with water artificially, other than by rain for improving the production of crops. The uncontrolled flooding of land by the over flow of rivers or streams is not categorized as irrigation practice although sometimes farmers use this incidence for crop production.

Improved Seed: is defined as crop variety which gives significantly higher yield, better quality and/or better benefit compared to traditional varieties of seeds and usually produced by the Ethiopian Seed Enterprise (ESE) in Ethiopia.

Fertilizer: refers to anything applied to the soil that is intended to increase the amount of plant nutrients available for crop growth. Fertilizers are usually categorized into two which include natural and chemical fertilizers. Examples of natural fertilizers are farmyard manure and wood ashes while that of the chemical fertilizers are DAP (Di-Ammonium Phosphate) and UREA (Ammonium Nitrate).

Pesticides: Pesticides are chemicals useful for the mitigation, control or elimination of pests which are harmful to crop. Insecticides, herbicides and fungicides are all considered as pesticides.

CHAPTER III

3 SUMMARY OF MAJOR FINDINGS OF THE SURVEY

3.1 AREA AND PRODUCTION

The general overview of the 2021/22 (2014 EC) Belg season agricultural sample survey estimate indicates a total cropland area estimates of about 2,080,790.44 hectare and production of 55,184,475.14 quintal, which includes grain crops, vegetables and root crops in the estimation. It is important to note that a crop named Mung bean/"Masho" was used to be reported as a cereal crop in the previous reports up to the year 2015GC (2006EC). In this report it is categorized as a pulse crop which is its proper category. With this background, the main findings of the 2021/22 (2014 EC) Belg season crop production sample survey are presented in this Chapter.

3.1.1 Grain Crops: refer to a major crop category that includes cereals, pulses and oil seeds, which are not only the major food crops of country and but also are the main sources of household income and sources of the foreign currency earnings. The 2021/22 (2014 EC) Belg season agricultural sample survey result indicates that a total land area of about 1,703,256.33 hectare was cultivated by the major Belg crops (grains) from which a total grain production of about 13,395,391.98 quintals was estimated at national level. As compared to the production (the most past recent Belg season production) year of the 2020/21 (2013 E.C.) grain cultivated area has decreased by 2.59% and the total production has also decreased by 9.21%. Out of the total Belg season grain cropland area and production, cereals accounted for the largest percentage interms of both crop cultivated area and production.

Cereals accounted for about 1,265,120.75 hectares (74.28%) of the national Belg grain cropland area) and about 10,882,678 quintals (81.24%) of the total Belg grain production). Following cereals is pulse crops which accounted for about 417,717.6 hectares (24.52% of the total grain area) and about 2,450,846.12 quintals production (which is 18.30% of the total grain production). Moreover, oilseeds are the other category of grain crops produced which accounted for an area of 20,417.98 hectares (1.20% of the total grain area) and

61,867.85 quintals of production (0.46% of total grain produced during the Belg season). (Formore details, see Summary Table 1).

Summary Table 1: Cropland Area and Production of Major Belg Crops: Private Peasant Holdings, 2021.22 (2014 E.C.), Country Level

Crop Category	Total Cropland Area		Total Production	
	in Hectare	%	In Quintals	%
<i>Cereal.....</i>	1,265,120.75	74.28	10,882,678.00	81.24
<i>Pulses.....</i>	417,717.60	24.52	2,450,846.12	18.30
<i>Oilseeds.....</i>	20,417.98	1.20	61,867.85	0.46
<i>Grain crops.....</i>	1,703,256.33	100.00	13,395,391.97	100.00

Inorder to illustrate the overall performance of the 2021/22 (2014 EC) crop production year, the total estimated cropland area and production of grain crops for private peasant holders for seasons of Belg, Meher as well as for commercial farms are presented in the Summary Table 2 below. By the year 2021/22 (2014 EC) the overall grain cultivated area estimate is about 14,549,881.18 hectare (Meher, Belg and Commercial farms).

Summary Table 2: Summary of National Grain Cropland Area and Production of Meher season, Belg Season and Commercial Farms during 2021.22 (2014 E.C.), Country Level

	Grain crops Area (Ha)	%	Grain Production(Qt)	%
Meher season private holdings	12,196,548.67	83.83	327,903,521.41	92.40
Belg season private holdings	1,703,256.33	11.71	13,395,391.97	3.77
Commercial Farms	650,076.18	4.47	13,579,881.18	3.83
<i>Grand total</i>	14,549,881.18	100.00	354,878,794.56	100.00

Out of the total grain area estimated, Belg season grain area accounted for about 1,703,256.33 hectares (11.71% of total grain area) where as Meher season grain area accounted for about 12,196,548.67 hectare (83.83% of the total grain area cultivated). Commercial farms grain cultivated area is about 650,076.18 hectares (4.47% of the total grain area cultivated).

The total grain crops produced during 2021/22 (2014 EC) amounts 354,878,794.56 quintals which is decreased by 5.51% from the 2020/21 (2013 E.C) total production considering Meher, Belg and commercial farms. Meher season, Belg season and commercial farms account for about 327,903,521.41 Quintals (92.40%), 13,395,391.97 Quintals (3.77%) and 13,579,881.18 Quintals (3.83%) of the total grain production, respectively for the year 2021/22 (2014 EC).

3.2 ESTIMATES OF THE 2021/22 (2014 EC) TOTAL CROP LAND AREA AND PRODUCTION OF MAJOR CROPS, MEHER AND BELG SEASONS

For the year 2021/22 (2014 EC), the total cropland area cultivated of major crops (grains) of the private peasant holdings during both seasons was estimated to be 13,899,804.99 hectares (commercial not included). Meher season accounts for 12,196,548.66 (87.75%) while Belg season accounts for 1,703,256.33 (12.25%) of grain crops area cultivated during both seasons. The estimated area of grain crops cultivated during both seasons is given in Summary Table 3.

Summary Table 3. Cropland Area under Major Crops for Private Peasant Holdings 2021/22 (2014 E.C), Both Seasons:Country Level

<i>Crop Type</i>	<i>Total Grain Cropland Area in Hectares during</i>					
	<i>Meher Season</i>		<i>Belg Season</i>		<i>Both seasons</i>	<i>Total</i>
	<i>Area in Ha</i>	<i>%</i>	<i>Area in Ha</i>	<i>%</i>	<i>Area in Ha</i>	<i>%</i>
<i>Cereal</i>	9,997,511.08	81.97	1,265,120.75	74.28	11,262,631.83	81.03
<i>Pulses</i>	1,676,888.30	13.75	417,717.60	24.52	2,094,605.90	15.07
<i>Oilseeds</i>	522,149.28	4.28	20,417.98	1.20	542,567.26	3.90
<i>Total</i>	12,196,548.66	100.00	1,703,256.33	100.00	13,899,804.99	100.00

As indicated in Summary Table 3, cereals accounted for about 11,262,631.83 hectares (81.03% of the total grain cultivated area) while Pulses and Oil crops accounted for about 2,094,605.90 hectare (15.07%) and 542,567.26 hectares (3.90%) of the total grain cropland area, respectively, in both seasons. Graphical representation of the estimates of total area

under major crops for private holdings in Ethiopia for both seasons during 2021/22 (2014 EC), is indicated using Figure 1 as follows.

Figure 1 shows that out of the total major crops cultivated area by private peasant holdings during both seasons of 2021/22 (2014 EC), Belg and Meher seasons account for 12.25% and 87.75%, respectively. Likewise, the overall performance of the major grain crops production estimates for both seasons is illustrated in Summary Table 4.

Summary Table 4. Total Production of Major Crops Harvested by Private Peasant Holdings, 2021/22 (2014 E.C.), Both Seasons: Country Level

<i>Crop Type</i>	<i>Total Production in Quintals, Harvested during</i>					
	<i>Meher Season</i>		<i>Belg Season</i>		<i>Both seasons</i>	
	<i>Production in</i>		<i>Production in</i>		<i>Production in</i>	
	<i>Quintals</i>	<i>%</i>	<i>Quintals</i>	<i>%</i>	<i>Quintals</i>	<i>%</i>
<i>Cereal</i>	290,808,263.25	88.69	10,142,138.69	74.69	300,950,401.94	88.13
<i>Pulses</i>	31,680,193.33	9.66	1,251,778.79	9.22	32,931,972.12	9.64
<i>Oil crops</i>	5,415,064.82	1.65	2,185,963.70	16.10	7,601,028.52	2.23
Total	327,903,521.40	100.00	13,579,881.18	100.00	341,483,402.58	100.00

The Summary Table 4 indicate that cereals production accounted for a bout **300,950,401.94** quintals (88.13% of the total grain crops) produced in both seasons. Pulses and Oil crops account for about **32,931,972.12** quintals (9.64%) and **7,601,028.52** (2.23%), respectively of the total sum of both seasons.

Moreover, the graphical representation of the estimates of the total production of major crops for private holdings in Ethiopia for both seasons during 2021/22 (2014 EC), is indicated using Figure 2 bellow.

Figure 2 indicates that out of the total of major grain crops produced by private peasant holdings during both seasons of 2021/22 (2014 EC), Belg accounts for 3.98% (which is about **13,579,881.18** quintals) whereas Meher accounts for 96.02% (about **327,903,521.40** quintals).

3.1.3Vegetables: holders living near to urban centres largely practice vegetable farming. Vegetable farms are not commonly practiced by the rural private peasant holders which is evidenced by the small volume of production recorded as indicated by the survey result. This is better indicated in Figure 3. Vegetables account about 4.31% of the area under all crops at national level during the Belg season. Out of the total area under vegetables,

84.49% and 5.65% are accounted for Ethiopian Cabbage and Tomatoes respectively (See Statistical Table 5.1).

3.1.4. Root Crops: - Root crops such as onion and garlic are indispensable to improve the taste and scent of the food we eat. Other crops like potatoes, sweet potatoes and taro/ Godere are among the major root crops that are consumed in the country. The economic importances of these crops prompt the peasant farm holders to grow many of the root crops as shown in the survey results. For more details, see the statistical Table 5.1. Root crops covered nearly 13.83% of the area under all Belg crops in the country. Potatoes, onion and sweet potatoes accounted for 82.06%, 6.08% and 5.72% of the total root crop area cultivated respectively. In terms of production, potatoes, sweet potatoes and onion accounted for 87.04%, 8.72% and 1.95% of the total root crop production respectively.

3.1.5 Trends of Grain Crops Area and Production

Figure 4 below displays trends of Belg season grain crops area and production for the period 2011/12 to 2021/22 (2004-2014EC) for the purpose of comparison and understanding the changes over time of the variables under discussion. Thus, the trend exhibits, annually on average, increasing trend in area (by about 5.43%) and production (by about 13.59%) of Belg season agriculture over the past ten years.

NOTES:

1. Some estimates in all reporting levels are excluded due to high coefficient of variations. Nevertheless, they are incorporated in the total estimates. Hence the sum of the specific estimates may not be equal to the total estimates.
2. Users are also advised to use those estimates with 30-50% coefficient of variation (CV) cautiously.
3. Even though area is reported for some crops in some reporting levels, there might be no production data is available for some crops. Such cases are designated by Not Stated (NS). In all tables, if the data are not available, it is labeled as “-”.

**Statistical Tables Presenting Area and
Production Results at
National and Regional Levels**

Summary Table5: Estimates of total Grain Cropland area and production for Meher (main), Belag (minor) Seasons of private Holdings and Commercial Farms (Large scale Farms (LSF) for 2021/22 (2014EC)

CROP TYPE	Total Cropland Area (In Hectare)			Total Cropland area (In Ha)	Total Production (In Quintal)			Total Production (In Quintal)

CHAPTER IV

4 FARM MANAGEMENT PRACTISES OF THE 2021/22 (2014 EC) BELG SEASON

4.1 INTRODUCTION

The observed experiences indicate that farmers' attitude and tendency towards adoption and acceptance of new innovations, modern agricultural techniques and technologies such as the use of fertilizers, irrigation and improved seeds have positive impact on the development of agricultural sector as a whole. In this regard, the extent of adoption of modern agricultural practices such as utilization of fertilizer, irrigation, pesticides and improved seeds by the private peasant farm holders is often used as important indicators for estimating the rate and extent of modern technologies used in the country's agriculture. The magnitude and level of modern/improved farm management practices in the agricultural sector are used to be the sole indicators of the transformation rate of the country's traditional agriculture to modern agriculture.

The overview of the 2021/22 (2014 EC) Belg season farm management practice of the country indicates that the total quantity of chemical fertilizers applied during the season has slightly decreased by 40.23% (from 2,345,435 quintals in 2013 E.C to 1,401,981 quintals in the 2014 E.C), at national level. Similarly, the total improved seed applied area has also decreased by about 35.847% (from 285,963 hectares in 2013 E.C to about 183,481 hectares in 2014 E.C). Interm of quantity as well, the total improved seeds applied has decreased by 66.93% which is a change from 196,666 quintals in 2013 E.C to 65,039 quintals in 2014 E.C).

Given this background, in Chapter four, the quantitative information about the use of modern agricultural inputs for Belg season crops of 2021/22 (2014 E.C.) of the private peasant holdings are presented both at country and regional levels. Furthermore, the general composition of the farm holders Surveyed applying inputs interms of age group, holders applying inputs by educational status and the number of holders and the damaged crop land area in hectare are summarized and presented in this Chapter. The data are generated from the findings of Belg season agricultural sample survey conducted by the Ethiopian Statistical Service in May 2022.

4.2 SUMMARY OF THE FARM MANAGEMENT PRACTICES OF THE 2021/22 (2014 E.C.) BELG SEASON AGRICULTURAL SAMPLE SURVEY

According to the 2021/22 (2014 EC) Belg Season Crop Production Sample Survey, total cropland area estimated is about 2,080,790 hectares of land while the estimated number of holders engaged in crop production activity is about 9,133,846 at national level. For more illustration see summary Table 6 bellow.

Table 6.Total Cropland Area and Number of Holders Engaged in 2021/22 (2014 E.C.) Belg Season Crop Production

Background Characteristics	Statistical Figures
Total Belg Cropland Area in Hectare	2,080,790
Number of Belg Crop Producing Holders	9,133,846
Improved Farm Management practiced Area (in Hectare)	1,746,157
Quantity of Commercial Fertilizer Applied (Quintals)	1,401,981

As indicated Table 6, during 2021/22 (2014 EC), out of the total area under Belg season crops, 1,746,157 hectares (83.92 % of the total cropland area), (which is the sum of individual area that was covered by each type of improved farm management practice as of chemical fertilizer, improved seeds, pesticides, etc.), was under the use of improved farm management practices that includes fertilizer, improved seed, pesticides, irrigation and extension services. Moreover, it was estimated that about 1,401,981 quintals of chemical fertilizer was utilized for crop production nationally. The total cropland areas categorized into different types of farm management practices for the season are summarized in Table 7.

Table 7. Belg Season Cropland Area under Different Farm Management Practices for Production Year of 2021/22 (2014 EC), National Level

Farm Management Practice Category	Cropland Area Under Different Farm Management Practices (Hectare)	Percentage from Total Cropland Area
Fertilizer	647,357.00	31.11
Improved Seeds	183,481.00	8.82
Pesticides	189,425.00	9.10
Irrigation	152,728.00	7.34
Extension	573,166.00	27.55
Total Belg Cropland Area	2,080,790.00	100.00

As shown in Table 7 above, the total crop land area estimated is **647,357** hectare for fertilizer, **183,481** hectare for improved seed, **189,425** hectare for pesticide, **152,728** hectare for irrigation and **573,166** hectare for extension. Out of the total Belg cropland area, the percentage distribution is **31.11** % for fertilizer, **8.82** % for improved seed, **9.10** % for pesticides **7.34** % for irrigation and **27.55**% for extension services. Furthermore, the survey findings indicate that cereals account for the largest share of the different farm management practices observed as summarized in Table 8.

Table 8. Summary of Cropland Area under Improved Farm Management Practices for Private Peasant Holdings, 20221/22 (2014 E.C.) Belg season, National

Crop Category	Cropland Area			
	Total Area		Area under Improved Farm Management Practice	
	Hectare	%	Hectare	%
Cereals	1,265,121.00	60.80	1,053,609.00	50.64
Pulses	417,718.00	20.07	201,629.00	9.69
Oil crops	20,418.00	0.98	9,203.00	0.44
Vegetables	89,778.00	4.31	58,994.00	2.84
Root Crops	287,756.00	13.83	422,721.00	20.32
Total	2,080,791.00	100.00	1,746,156.00	83.92

As indicated in summary Table 8 above, estimates of total cropland area under different farm management practices shows that cereals accounted 1,265,121.00 hectares (60.80 % of the total all cropland area), followed by pulses with 417,718.00 hectares (20.07 % from the total all cropland area). Root crops, vegetables and oil crops accounted for 287,756.00 hectare (13.83 %), 89,778.00 hectares (4.31 %) and 20,418.00 hectare (0.98 %), respectively. Out of the total cereal cultivated cropland area, 1,746,156.00 hectare (83.92 % of the total cropland area) is cultivated with improved farm management practices (includes all fertilizer, improved seed, pesticides and irrigation). The respective numbers are 1,053,609.00 hectare (50.64 %) for cereals, 201,629.00 hectares (9.69 %) for pulses, 422,721.00 hectare (20.32 %) for root crops, 9,203.00 hectare (0.44 %) for oil crops. The corresponding figure for vegetables can be referred as 58,994.00 hectare (2.84 %).

4.3 FERTILIZER APPLIED AREA AND FERTILIZER TYPE USED

The results of the survey indicate that Belg season cropland area under both natural and chemical fertilizers were estimated to be 1,131,478 hectares, covering 54.38% of the total area under Belg seasons crops of the private holdings. The percentage of different fertilizers applied is given using summary Table 9 as follows.

Table 9. Summary of Fertilizer Applied Cropland Area for Private Holdings of 2021/22 (2014 E.C.) Belg season, National

Fertilizer Type	Fertilizer Applied Area		Percentage from Total Belg Cropland Area
	Hectare	Percentage of Fertilizer Applied Area	
Natural Fertilizer	484,122.00	42.79	23.27
Commercial Fertilizers	647,357.00	57.21	31.11
DAP	4,529.00	0.40	0.22
Urea	35,599.00	3.15	1.71
Urea + DAP	1,297.00	0.11	0.06
NPS	284,628.00	25.16	13.68
NPS + Urea	143,096.00	12.65	6.88
Mixed (Blended)	108,246.00	9.57	5.20
Mixed (Blended)+Urea	69,962.00	6.18	3.36
Total Fertilizer Area	1,131,478.00	100.00	54.38
Total Cropland Area	2,080,790.00		100.00

As indicated in Summary Table 9, nearly 484,122.00 hectares (42.79 % of the total fertilizer applied cropland area) is applied with natural fertilizer. This accounts 23.27 % of the total Belg cropland area. The coverage of chemical fertilizers is estimated to be **647,357.00** hectares (57.21 % from the total fertilizer applied area and 31.11 % from the total cropland area). The application of DAP, UREA and the mixture of DAP and Urea, NPS and the mixture of NPS and Urea, Mixed (Blended) and the mixture of Mixed (Blended) and Urea ,collectively, called as commercial fertilizers, constitute 0.40 %, 3.15 %, 0.11 %, 25.16 %, 12.65 %, 9.57 %, and 6.18 % of the total fertilizer applied cropland area, respectively. The percentages of DAP, UREA, the mixture of DAP and Urea, NPS and the mixture of NPS, Mixed (Blended) and the mixture of Mixed (Blended) and Urea applied out of the total cropland area of the Belg season are: 0.22, 1.71, 0.06, 13.68, 6.88, 5.20, and 3.36 respectively.

4.4 THE USE OF NATURAL FERTILIZER

In general, the application of natural fertilizers for Belg season crops in 2021/221 (2014 E.C.) vary from crop to crop. Of the total area under natural fertilizer, the highest proportion was reported for maize crop, which was estimated at 205,596 hectares (42.47%). The fertilized area (natural fertilizer) under red haricot beans stood second with 83316 hectare (17.21%) while Potatoes stands third accounting for 45462 hectare (9.39%) of the total country level natural fertilizer applied of Belg season cropland area.

4.5. THE USE OF COMMERCIAL FERTILIZERS

The total cropland area under commercial fertilizers is about 647, 357 hectare (57.21% of total fertilizer applied cropland area), in 2021/22 (2014 E.C.) Belg season. Out of this, NPS is the most used fertilizer which accounted for about 284,628 hectare (25.16% of the commercial fertilizer applied area). The second most applied commercial fertilizer is the mixture of NPS and Urea (NPS + UREA) covering 143,096 hectare (accounting for 12.65%) while the use of Mixed (Blended) stands in the third position applied on 108,246 hectare (9.57) of the total commercial fertilizer applied area. This is more indicated using graph and presented as follows:-

Figure 4: Percentage Distribution of Chemical Fertilizer Applied Cropland Area by Fertilizer Type for Private Holdings of Belg 2021/22 (2014 E.C)

The commercial fertilizers applied area vary between crops. The highest area is reported for potatoes accounting for 176,173.00 hectares (27.21 %) followed by maize which is 148,560.00 hectares (22.95 % of commercial fertilizer applied area), which is more illustrated in the statistical table below.

Table 10. Summary of Fertilizer Chemical Fertilizer Applied Cropland Area Rank for the Major Three Crops for Private Holdings of 2021/22 (2014 E.C.) Belg season, National

Crop type	Chemical fertilizer Applied Area		Rank
	Hectare	Percentage	
Potatoes	176,173.00	27.21	1st
Maize	148,560.00	22.95	2nd
Barley	86,816.00	13.41	3rd

Region-wise, the distribution of both natural and commercial fertilizers applied varies from region to region. For instance, of the total area under both (Natural + Commercial) fertilizers, the highest was reported for S.N.N.P region accounting for nearly 534,481 hectare (47.24 % of total fertilized area). Oromia region accounted for 363,260 hectares (32.10 %) of the total country level of both natural and commercial fertilizers applied cropland area) while Amhara region accounted nearly 183,056.00 hectare (16.18 %).

Table 11. Summary of Chemical Fertilizer Applied Cropland Area Rank By Region for Private Holdings of 2021/22 (2014 E.C.) Belg season, National

Region	Crop type	All Fertilizer			
		Area			Quintal
		Estimate (Ha)	%	Rank	Estimate
National	All	1,131,478.00	100.00		1,401,981.00
SNNP	All	534,481.00	47.24	1ST	309,341.00
Oromia	All	363,260.00	32.10	2nd	395,071.00
Amhara	All	183,056.00	16.18	3rd	660,093.00
Sidama	All	43,317.00	3.83	4th	32,149.00
Benishangul Gumuz	All	3,861.00	0.34	5th	1,536.00
Dire Dawa	All	1,133.00	0.10	6th	1,850.00
Hareri	All	1,072.00	0.09	7th	30.00
Afar	All	938.00	0.08	8th	1,748.00
Somali	All	267.00	0.02	9th	125.00
Gambela	All	93.00	0.01	10th	37.00

In terms of quantity, the total commercial fertilizer applied is 1,401,981 quintals. Out of this, the mixture of Mixed and Urea is the most applied commercial fertilizer accounting for 386,821 quintals (27.59%). The percentage distribution of the chemical fertilizers applied during the production season is more indicated by Figure 6.

As indicated in Figure 6, the mixture of Mixed and Urea is (Mixed + Urea) is the first most applied chemical fertilizer (386,821 qt, 27.59%), application of NPS is the second most applied fertilizer type which is about 363,837 quintals (25.95%) while Urea+DAP is the least type of chemical fertilizer applied accounting about 2,145 quintals (0.15%).

4.6. TRENDS OF ALL CROPLAND AREA AND THE USE OF COMMERCIAL FERTILIZERS

Figure 7 shows the trends of (the summary results of the previous nine consecutive surveys undertaken on yearly bases) all cropland area, total fertilizer applied area and total amount of commercial fertilizer applied over the period 2012/13 up to 2021/22. The examination of the consecutive belg season agricultural sample survey results display an increasing trend of all crop land area (about by 6.13%), fertilizer applied area (nearly by 26.58%) and amount of chemical fertilizer (by 26.58%) used over time.

4.7. THE USE OF IMPROVED SEEDS

Better application of improved variety seeds helps to harvest higher yield compared to the use of traditional variety seeds. The survey findings indicate that the total crop area applied with improved seed is nearly 183,481 hectare while total quantity used is 65,039 quintals, at country level. The area applied with improved seed is about 8.82% of the total Belg 2014E.C cropland area. The total quantity of improved seeds used is nearly 4.55% of the total seeds used during the season.

4.8. NUMBER OF BELG CROP PRODUCING HOLDERS REPORTING THE USE OF IMPROVED FARM MANAGEMENT PRACTICES BY AGE

To easily identify the age category of the holders who used to earn the economic benefits generated from practicing the use of modern farm management practices on their holdings, Belg crop producing holders' have been categorized into nine groups. These are age groups below 18 years, 18 to 20 years, 21 to 24 years, 25 to 29 years, 30 to 39 years, 40 to 49 years, 50 to 59 years, 60 years and above as well as not stated holders groups. The survey result shows that a total of 9,133,206 holders were engaged in the overall Belg season agricultural activities in 2021/22 (2014 E.C.). Accordingly, the category with the largest number of holders is in the age group 30-39, with 2,501,498 holders (which is 27.39% of the total holders). The age group of 40 to 49 stands second with 2,499,360 holders (27.37% of total holders). The percentage distribution and number of Belg crop producing holders reporting the use of farm inputs by age group for private holding is given in Figure 8 and Table 21.

Moreover, 2,444,016 holders (26.76 % of total holders) used fertilizer and 1,117,638 holders (12.24 %) used improved seeds. Likewise, 533,985 holders (5.85%) applied pesticides and 1,189,645 holders (13.30 %) used irrigation at national level for 2021/22 (2014 E.C.). Belg season, in order to obtain higher crop yield (See Figure 8 below and Table 21).

4.7 NUMBER OF BELG CROP PRODUCING HOLDERS REPORTING THE USE OF IMPROVED FARM MANAGEMENT PRACTICES BY EDUCATIONAL STATUS

Holders educational status play important role in the adoption of new and improved farming technologies. Therefore, in this report, an attempt is made to categorize holders reporting the use of modern farming practices during the 2021/22 (2014 E.C) Belg season crop production based on their educational status. Based on their education level, holders are categorized in to eight groups consisting of illiterate, literate, grade 1 to 3, grade 4 to 6, grade 7 to 8, grade 9 to 11, grade 12 complete and above grade. The number of Belg crop producing holders using different farm inputs based on education is graphically presented in Figure 9.

According to the results of the 2021/22 (2014 EC) Belg season crop production sample survey, out of the total number of holders (9,133,206), the largest category of the holders number is under the illiterate category in which the number of all crop holders is 4,769,990 (which accounts for 52.23 % of total holders) (See Figure 10).

Under this category, 1,189,111 holder are reported for using fertilizer, 540,356 holders using improved seeds, 258,743 using pesticides and 638,552 using irrigation.

The second largest category of the number of holders lies on education level of grade four to six. Within this category, the number of holders reported for using all cropland is 1,568,675. The respective number of holders is 472,487 for fertilizer, 197,931 for improved seeds, 191,115 for pesticides and 153,264 for irrigation in the education category.

4.8 NUMBER OF HOLDERS REPORTING CROP DAMAGE BY CAUSES OF DAMAGE

The total number of Belg crop producing private peasant holders who reported crop damage and the cause of damage during the year 2021/22 (2014 EC), Belg season are estimated to be about 4,289,067 and the damaged cropland area was estimated to be 410,834 hectares. For illustration purpose, the total cropland area affected by crop damage of different crop types in hectare and the various causes of crop damage are presented graphically in Figure 11.

As indicated in Figure 11, the highest cropland area damaged was reported for cereals which is 195,349 hectares, followed by pulses with about 119,352 hectares and oil crops with 4,382 hectares. With regard to the causes of crop damage, it is reported that 351,407 hectares (85.54%) was damaged due to shortage of rain. The second highest cause of crop damage pest with estimated crop damaged area of 16,488 hectares (4.01%), while Crop disease stands third position in damaging 13,668 hectare (3.33%) cropland area (For further details, see Figure 11 and Table 23).

APPENDIX I

**Estimation Procedures of Totals,
Ratios and Sampling Errors**

APPENDIX I Estimation Procedures of Totals, Ratios and Sampling Errors

The following formulas were used to estimate total area of land under specific crop and production of specific crop in a stratum.

1. For Estimating Total Area of Land under Specific Crop:

$$\hat{A}_h = \sum_{i=1}^{n_h} W_{hi} \sum_{j=1}^{h_{hi}} a_{hij} = \sum_{i=1}^{n_h} W_{hi} a_{hi}$$

in which, $W_{hi} = \frac{M_h H_{hi}}{n_h m_{hi} h_{hi}}$ is the basic weight.

Where:

h represents the stratum

n_h is the total number of sample EAs successfully covered in the h^{th} stratum.

M_h is the measure of size of the h^{th} stratum as obtained from the sampling frame.

m_{hi} is the measure of size of the i^{th} sample EA in the h^{th} stratum obtained from the sampling frame.

H_{hi} is the total number of agricultural households of the i^{th} sample EA in the h^{th} stratum.

h_{hi} is the number of sample agricultural households successfully covered in the i^{th} sample EA in the h^{th} stratum.

a_{hij} is the value of area for agricultural household j , in the i^{th} EA in the h^{th} stratum under a specific crop.

a_{hi} is the sample total area under specific crop for EA i in stratum h

\hat{A}_h estimate of total area under specific crop in stratum h

2. For Estimating Total Number of Holders :

$$Y_h = \sum_{i=1}^{n_h} W_{hi} H_{hi}$$

in which, $H_{hi} = a_{hi} * \bar{Y}_{hi}$

Where,

\bar{Y}_{hi} is average yield per square meter of a specific crop in the i^{th} EA in the h^{th} stratum.

H_h is estimate of total quantity of production of a specific crop in the h^{th} stratum.

H_{hi} is estimate of total quantity of production under specific crop for EA i in stratum h .

3. Sampling Variance of Estimates:

Sampling variance for the estimate of stratum total of area, production and yield for a specific crop are estimated by the following formulas.

$$Var(\hat{A}_h) = (1 - f_h) \frac{n_h}{n_h - 1} \sum_{i=1}^{n_h} \left(\hat{A}_{hi} - \frac{\hat{A}_h}{n_h} \right)^2 + f_h \sum_{i=1}^{n_h} (1 - f_{hi}) \left(\frac{h_{hi}}{h_{hi} - 1} \right) \sum_{j=1}^{h_{hi}} \left(\hat{A}_{hij} - \frac{\hat{A}_{hi}}{h_{hi}} \right)^2$$

$$Var(\hat{P}_h) = (1 - f_h) \frac{n_h}{n_h - 1} \sum_{i=1}^{n_h} \left(\hat{P}_{hi} - \frac{\hat{P}_h}{n_h} \right)^2 + f_h \sum_{i=1}^{n_h} (1 - f_{hi}) \left(\frac{h_{hi}}{h_{hi} - 1} \right) \sum_{j=1}^{h_{hi}} \left(\hat{P}_{hij} - \frac{\hat{P}_{hi}}{h_{hi}} \right)^2$$

Where,

f_h = average first stage probability of selection of EAs within stratum h .

$f_{hi} = \frac{h_{hi}}{H_{hi}}$ = average second stage probability of selection within the i^{th} sample EA in stratum h .

$\hat{A}_{hi}, \hat{P}_{hi}$ are weighted total area and production, respectively, of a specific crop in the i^{th} EA and h^{th} Stratum.

$\hat{A}_{hij}, \hat{P}_{hij}$ are weighted values of area and production, respectively, from j^{th} agricultural household in the i^{th} EA and h^{th} stratum under a specific crop.

Since all strata are independent, the total variance at regional and country level is computed by aggregating the result obtained at Zone/Special Wereda level, i.e.

$$Var(\hat{A}) = \sum_h^L Var(\hat{A}_h), Var(\hat{P}) = \sum_h^L Var(\hat{P}_h)$$

Where, L is the number of strata (Zone/Special Wereda).

In estimating the sampling variance by the above formula, selection of EAs within a stratum is assumed to be with replacement. By so doing the variance estimate may be slightly over estimated but it greatly simplifies the estimation procedure.

4. Coefficient of Variation (CV) of Estimates:

Coefficient of Variation (CV) in percentage of estimate of stratum total of area and production for a specific crop are given by:

$$CV(\hat{A}_h) = \frac{\sqrt{Var(\hat{A}_h)}}{\hat{A}_h} * 100, CV(\hat{P}_h) = \frac{\sqrt{Var(\hat{P}_h)}}{\hat{P}_h} * 100,$$

5. Ninety-five Percent Confidence Interval (CI) of Stratum Total of Area:

$$\hat{A}_h \pm 1.96 * SE(\hat{A}_h) \quad ,$$

Where $SE(\hat{A}_h) = \sqrt{Var(\hat{A}_h)}$ is standard error of the estimate of the stratum total of area.

Estimates of standard error and confidence interval for the other estimates can also be calculated by adopting the above formulas.

APPENDIX II

Standard Errors and Coefficient of Variation for Area and Production

APPENDIX IV

QUESTIONNAIRE

Form AgSS 2013/8
CENTRAL STATISTICAL AUTHORITY
ETHIOPIAN AGRICULTURAL SAMPLE SURVEY 2021/22 (2014 EC)

PART I – IDENTIFICATION PARTICULARS

1	2	3	4	5	6	7	8	9	10	11	12	13	14
REGION	ZONE	WEREDA	PA /	EA	HH	HH	HOLDER	HOLDER'S			HIGHEST GRADE COMPLETED	HOLDER'S HH SIZE	FARMING TYPE CROP=1 LIVEST=2 BOTH=3
			REST. AR	LOCAL		HEAD SEX 1=M 2=F		ID	NAME	AGE			

PART II – CROP FIELD / OTHER LAND USE

15	16	17			
SER. NO.	QUESTIONS FOR THE HOLDER	PARCEL NO.	FIELD NO.		
		IS THE FIELD PURE STAND =1		OTHER LAND USE=3	
		MIXED CROP =2	CROP NAME		CROP NAME
		CROP/OTHER NAME	CODE	CODE	CODE
1	Ownership Own = 1 Rented in =2 Other =3				
1.1	For how much did you rent this plot? If it is your own, how much would you pay if you rent it? (If it is share cropped in, estimate the share of the production that you will share to the owner of the plot in birr).				
2	Is field under Extension Program? Yes =1 No = 2				
3	Is Field Irrigated? Yes =1 No =2				
3.1	If Field Irrigated source of water. River =1 Lake =2 Pond =3 Harvested water =4 other =5				
3.2	Type of irrigation: Full/conventional irrigation = 1 Supplemental irrigation = 2				
4	How many times was the field tilled in this production season? Zero tillage (direct drill/seedling) = 1 Tilled once = 2 Tilled two times = 3 Tilled three or more times = 4 Not at all(not cultivated) = 5				
4.1	Slope of the field/plot: Plain =1 partially slopy = 2 slopy = 3				
5	Did you use prevention methods against soil erosion on this field? Yes = 1 No = 2 → Q6				
5.1	If the answer to Q5 is Yes, main soil erosion preventive method used: Terracing = 1 Bund = 2 Planting trees = 3 Plough across the contour = 4 Rotational grazing = 5 avoiding grazing = 6 Creating grassed waterways = 7 Other (specify) = 8				
6	Do you apply any method to maintain /improve soil organic matters on this field/plot? Yes = 1 No = 2 → Q7				
6.1	(If the response to Q6 is YES, what method do you mainly used? Growing annual crops in rows between perennial crops = 1 maintaining continuous soil cover (residues) = 2 Maximizing the use of organic matter sources =3 Using appropriate placement of nitrogen fertilizers = 4 Avoiding grazing = 5 Increasing the complexity of the crop rotations = 6 intercropping the complexity crop rotations with leguminous crops = 7 other = 8				
7	How was the seed planted/ sowed? (For only Temporary crops) Broadcasting = 1 Row planting = 2				

8	If more than one crop grown or if crops were intercropped, give the percentage of land devoted to each crop (the total percentage should equals 100).								
9	Type of seed/seedling sowed/planted: Improved seed = 1 local seed = 2 → Q16								
10	10.1 If code 1 for Q9, the seed used was: (For only Temporary crops) New improved seed for this production season = 1 Improved seed left over from last year production season = 2 Improved seed saved from previous harvest = 3 (if Code 2 or 3 for Q13.1, → Q16)								
	10.2 If code 1 for Q9, From whom/or institution did you obtain/purchase the seed? Code (a): (codes are available in enumerators manual).								
11	(For Cereals, Pulses and Oil seeds only:) If improved seeds are used, (If code 1 for Q10.1, quantity of seed used (in Kg) (For Cereals, Pulses and Oil seeds only:) If improved seeds are used, (If code 1 for Q10.1, quantity of seed used (in Kg)	Kilo	Gram	Kilo	Gram	Kilo	Gram		
12	(For Cereals, Pulses and Oil seeds only:) If improved seeds are used, (If code 1 in Q10.1), Total cost of seed (Birr) (For Cereals, Pulses and Oil seeds only:) If improved seeds are used, (If code 1 in Q10.1), Total cost of seed (Birr)	Birr	Cents	Birr	Cents	Birr	Cents		
113	<i>For Cereals, Pulses & Oilseeds only</i> Quantity of indigenous seeds used	Kilo	Gram	Kilo	Gram	Kilo	Gram		
13.1	(for only cereals, pulses and oil seeds): cost of local seed used (in Birr).	Birr	Cents	Birr	Cents	Birr	Cents		
14	Was there any crop damage on this field?? Yes = 1 No = 2								
15	If yes in question number 10, Cause of damage → Code →								
16	Percent of damaged crop								
17	Prevention/precaution measure taken? Yes = 1 No = 2								
18	Type of measure if any? Chemical = 1 Non – chemical = 2 Both = 3								
19	Chemical type used if any. Pesticide = 1 herbicide = 2 Fungicide = 3 1 & 2 = 4 1 & 3 = 5 2 & 3 = 6 All = 7								
19.1	Quantity of chemical used	Pesticid		herbicide		Fungicide			
		Quantity	UoM	Quantity	UoM	Quantity	UoM		
19.2	Price of quantity of chemical used	Pesticid		herbicide		Fungicide			
		Birr	Cents	Birr	Cents	Birr	Cents		
20	Is Fertilizer Used? Yes = 1 No = 2								
21	Type of fertilizer used if any? Natural = 1 Chemical = 2 Both = 3								
	If chemical fertilizer used 22.1 Type UREA = 1 DAP = 2 Both = 3 NPS = 4 NPS & DAP = 5								
	22.2 . . Quantity of chemical fertilizer applied to the field (by fertilizer type)	Urea		DAP		NPS		Blended	
		Killo	Gram	Killo	Gram	Killo	Gram	Killo	Gram
	22.3 Total Cost of chemical fertilizer applied, by fertilizer type, (in Birr)	Urea		DAP		NPS		Blended	
		Birr	Cents	Birr	Cents	Birr	Cents	Birr	Cents

23	If natural fertilizer used, type Manure = 1 Compost = 2 Organic = 3 1 & 2 = 4 1 & 3 = 5 2 & 3 = 6 All = 7 others = 8									
24	Quantity of crop produced in standard/local measurement	Name	Code	Quantity	Name	code	Quantity	Name	Code	Quantity
24.1										
25	Number of oxen/other animals used during land clearing, land preparation and planting.									
25.1	Total cost paid for animal services (oxens/other animals) during land clearing, land preparation and planting (if own animals used, estimated cost)									
					M	F	C			
26	Number of days family members spent on this field during land clearing, land preparation and planting (in perso-days).									
26.1	Estimated cost for family members participated on this field during land clearing, land preparation and planting.(in Birr)									
27	Number of days hired persons spent during land clearing, land preparation and planting.(in person-days)									
27.1	Total cost for hired persons during land clearing, land preparation and planting.(in Birr)									
28	Labour sharing (debo, wenfel,...): number of days persons in the work party spent during land clearing, land preparation and planting.(in person-days)									
28.1	Total cost paid for persons participated in the work party, (including spent in the form of foods, drinks, ...) (in Birr)									
29	Total cost spent for mationary service (if own mationary used, estimate in monetary value)									
30	Total cost spent for animal service for transport during land clearing, land preparation and planting.									

M = Male, F = Female , C = Children (under 15 years of age)

FORM 2A: SECTION 3: Area of field/plot measured by (GPS, Compass Rope, or Measurer) (Belg 2014 E.C)

1	2	3	4	5	6		7	8	9	10	11	12	13		14
HH Id	Sex of HH head	Holder Id	Parcel No.	Plot No.	Crop name		Was area of the field measured using GPS, Compass-Rope or Measurer? GPS = 1 Compass Rope = 2 Measurer = 3 Not measured = 4	If field is measured using GPS or Measurer, accuracy	Closure error (for fields measured using compass and meter only)	Area of field/Plot (in sq.m.)	If field is not measured, reason: Difficult to measure with compass /measurer/GP S = 1 Other = 2	If field is measured using GPS or measurer software, field obstruction Not protected/bare = 1 Covered with trees/perennial crops =2 In compound = 3 Partially covered = 4 Other (specify) = 5	Date of measurement		How large is the plot in Local Units?
